WDD 231 – Personal Project Proposal

The webpage that I am intending to design will be focused around books and book reviews; I'm thinking along the lines of "The Literary Loft with LittleMissMiso" (my GitHub ID), as if LittleMissMiso was an established book reviewer. It will contain a Home page, a Book List page (with reviews) that will populate from a JSON file, and an 'About Me' page. I'm aiming for a cozy/classic vintage vibe. I intend to integrate things such as featured books (that will randomize using JavaScript), functional links, and forms to ask for book recommendations. If I'm feeling ambitious, I might try my hand at utilizing the weather API's we used last week to populate different sayings depending on weather (such as 'good time to read at the beach', or 'grab a cup of hot tea and enjoy a book'). I chose this subject because I am a very dedicated book lover, and have read several hundred books over the last few years. I feel it is a subject I am comfortable with, and can have some fun expanding upon and looking back at past reads for subject information. I feel it would be a site that someone like me would quite enjoy looking through to find new books.
